

Water Playgrounds

WaterFeatures By Design specialises in the design and construction of safe, interactive, low-maintenance water play areas for children, suitable for installation at locations including:

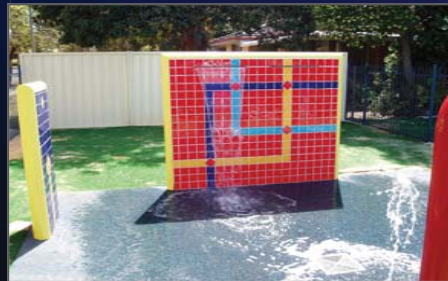

- public open spaces - parks, ovals, city squares etc
- residential developments
- school yard & council playgrounds

- indoor and outdoor aquatic centres
- childcare facilities
- children's health centres & hospitals

Each water play area is custom designed to include a number of features such as:

- no standing water
- completely random sequencing for all water features via pumps and solenoids

- fully recycled and automatically treated water
- exposed aggregate concrete or rubber-based flooring
- unlimited choice of colour schemes, play area themes and layout design
- touch pad activation
- option of interchangeable play area components
- Health Department of WA approval

Limestone & Cladding

Forget painting! If you really want to create a truly original and stunning feature wall, why not consider one of the many cladding options currently available. Recent design trends

favour the rustic, natural beauty of stone which comes in many different colours and styles, all of which inject a contemporary yet earthy feel into any room - inside or out. Whether it's

sandstone tiles, limestone cladding, knapped face stone or polished granite, the team at Water Features by Design can help create a truly original feature in your home or garden.

Water Features by Design

Original. Stylish. Stunning.

Water walls, ponds, spillways & fountains

A water feature is the perfect accessory for every home and garden.

Whether you're after a gentle trickle to soothe your senses, a silent mirror pool to reflect your garden's beauty or roaring cascades of sound to block undesirable noise, there's a water feature design to suit every style and purpose.

WaterFeatures by Design specialises in the design and construction of all types of internal and external water features, including water walls, ponds and spillways.

Each feature is custom designed to client specification and incorporates a range of finishes including glass, stainless steel, stone, mosaics and copper.

If you've got an existing structural wall we can pre-make some elements of the feature off site and install it on location within a couple of days. In situations where there is no existing wall, the team can construct both the structural wall and the feature on site, and include a couple of planter boxes or limestone feature walls to enhance the design.

WaterFeatures by Design custom-makes every feature meaning no two are exactly alike.

We take great pride in our ability to service diverse individual requirements and create a feature that captures the exact look and style the client had in mind.

In addition to our water feature design service, we also provide professional stone cladding services, limestone fencing and planter boxes, and specialise in the design and installation of interactive water playgrounds for children.
